PROFESSIONAL SUMMARY

Computer Science graduate (2026) with hands-on experience in Python, SQL, and Excel-based data analysis through internships and applied training. Skilled in exploratory data analysis, data cleaning, and building reporting workflows using pivot tables, calculated fields, and dashboards. Currently strengthening business intelligence and automation skills (Power BI, advanced Excel/VBA) to support data-driven decision-making. Detail-oriented, fast learner, and comfortable working with cross-functional teams in fast-paced environments.

TECHNICAL SKILLS

Programming & Analysis: Python (data manipulation, EDA, feature engineering), SQL (joins, subqueries, group functions)
Reporting & BI: MS Excel (Pivot Tables, Calculated Fields, Slicers, Running Totals, Value/Date Filters), currently building Power BI proficiency
Data Quality & Docs: Data validation, reconciliation, process documentation, requirement gathering
Tools & Platforms: VS Code, Git & GitHub
Core Strengths: Data Analysis, Reporting, Process Improvement, Attention to Detail, Stakeholder Communication, Teamwork

INTERNSHIP EXPERIENCE

Data Science & AIML Intern 06/2024 – 07/2024

- Performed exploratory data analysis on real-world datasets using Python libraries to identify trends and support business insights.
- Applied data cleaning, preprocessing, and transformation techniques to improve dataset accuracy and usability for analysis.
- Built and validated SQL queries to extract and reconcile data, strengthening reporting reliability.
- Conducted feature engineering to improve the quality of downstream analytical and predictive outputs.

Artificial Intelligence Intern 08/2024 – 09/2024

- Developed supervised machine learning models for classification problems using Python, translating data patterns into actionable insights.
- Performed data preprocessing, feature engineering, and model evaluation to ensure accurate, decision-ready outputs.
- Prepared structured analytical reports summarizing findings for non-technical stakeholders.

PROJECTS

Multi-Platform Price Comparison & Product Recommendation System

- Built a data-driven comparison application using Python, FastAPI, MongoDB, and Next.js, automating data collection across multiple sources.
- Improved data accuracy through structured validation and processing pipelines — directly applicable to data quality checks and reconciliation.

Fake News Detection System using Machine Learning

- Built a classification model in Python/Scikit-learn using TF-IDF feature extraction on structured text datasets.
- Applied systematic data preprocessing and model evaluation methodology, demonstrating rigorous analytical process.

CURRENT DATA ANALYTICS TRAINING

QSpiders, Punjagutta, Hyderabad — Python, SQL & Advanced Excel for Data Analytics (2026)

- Hands-on training in advanced Excel: pivot tables, calculated fields, running totals, value/date filters, and slicers for business reporting.
- Applied SQL querying and Python data-handling techniques to real datasets as part of structured coursework.

EDUCATION

B.Tech, Computer Science and Engineering — SVS Group of Institutions, Warangal 10/2022 – 05/2026
CGPA: 8.3

Intermediate Education — Acumen Junior College 03/2020 – 05/2022
Percentage: 96.2
